## Thank You

---

Thank you for purchasing my theme. If you have any questions that are beyond the scope of this help file, please feel free to email via my profile page contact form.

## 01: Html Sections

---

### Full Screen Background Image

The full screen background is set using FullScreenr - <http://nanotux.com/blog/fullscreen/>

Choose your image and add it to the top of the index.html body code:

```
<!--ADD YOUR BIG BACKGROUND IMAGE HERE-->
<!--SET THE SIZE IN THE JS AT THE FOOT OF THE PAGE -->

```

Next, scroll all the way down to near the bottom of the index.html page and find the following to set your image size:

```
<!--SET YOUR BACKGROUND IMAGE SIZE HERE-->
<!-- // You need to specify the size of your background image here var FullscreenOptions = { width: 1024, height: 726, bgID: '#bgimg'
};
// this will activate the full screen background!
jquery.fn.fullscreenr(fullscreenroptions);
//--> </script>
```

### Main Slider

The top slider is controlled using FlexiSlider - <http://www.woothemes.com/flexslider/>

Image Size: 800px x 504px/ 500px, stored in style > images.

### Main Accordion

The content sits in a simple responsive accordion that, when opened, will slide to the top of the viewport and reveal the content by fading it in. The idea is to avoid that the user has to scroll the content area into place.

The HTML structure will consist of a wrapper with the class and ID st-accordion and an unordered list. The list items will have a link element which will serve as the item title and a content area that is initially hidden. The span with the class st-arrow will be the little indicator on the right side that we will make appear when we hover over its parent, the link element.

### Small Carousel

The carousel on the Studio section is controlled using Elastislide a responsive jQuery carousel that will adapt its size and behavior in order to work on any screen size. Inserting the carousels structure into a container with a fluid width will also make the carousel fluid.

### Gallery

The fullscreen gallery is controlled using PhotoSwipe, an image gallery for mobile devices. - <http://www.photoswipe.com/>. The large images are kept in images > full and the thumbs in images > thumb.

### Services / Testimonial Slider

This is a dynamic carousel with sliding divs (with any content inside) that can adapt to any layout. Previous-next links, auto-advance, pagination and keyboard support are available.

Read More: <https://github.com/Wilto/Dynamic-Carousel>

## Enlarged Images

This theme uses Pretty Photo for enlarged images, not only does it support images, it also support for videos, flash, YouTube, iframes and ajax. <http://www.no-margin-for-errors.com/projects/prettyphoto-jquery-lightbox-clone/>

The gallery pictures link together by adding data-rel = "prettyPhoto[pp\_gal]" to each picture. So if you wanted to add another group of linked photos you would add another id to them, e.g data-rel = "prettyPhoto[pp\_gal2]". To enlarge any single pic add the class data-rel="prettyPhoto".

You can also add the class "fade" for the opacity effect on hover.

## Contact Form

To get the contact form to forward to your email address.

a) In a text editor of your choice, open send.php

At the top of the page, you will see the following code:

```
$email_to = "ADD YOUR EMAIL ADDRESS HERE";
```

b) Simply add your email address within the quote marks where it says - Add Your Email Address

c) You may also want to change the thank you message. You can do this by opening style > js > custom.js

Find the commented section - 'Form Validation Script' which is at the top of the code.

You will see: `<p class="success">Thanks!<br/>Your email was sent successfully.<br/>I will contact you as soon as possible.</p>`

Change this to your thank you message.

## 02: Sources & Credits

---

I have used the following scripts and images:

1. **FullScreen**

<http://nanotux.com/blog/fullscreen>

2. **Main Accordion**

<http://tympanus.net/codrops/2011/10/12/flexible-slide-to-top-accordion/>

3. **FlexiSlider**

<http://www.woothemes.com/flexslider/>

4. **Elastislide**

<http://tympanus.net/codrops/2011/09/12/elastislide-responsive-carousel/>

5. **PhotoSwipe**

<http://www.photoswipe.com/>

6. **Pretty Photo**

<http://www.no-margin-for-errors.com/projects/prettyphoto-jquery-lightbox-clone/>

7. **Dynamic Carousel**

<https://github.com/Wilto/Dynamic-Carousel>

8. **Tweet**

<http://tweet.seaofclouds.com/>

9. **Preview Images by Mark Sebastian**

<http://www.flickr.com/photos/markjsebastian/>

## 03: Extras

---

1. This theme uses Google web font Josephin for its headings

<http://www.google.com/webfonts/specimen/Josefin+Sans>

2. Open Sans for body text

<http://www.google.com/webfonts/specimen/Open+Sans>

3. I have included the social network icons, twitter bird icon and slider navigation buttons in the folder named elements, just incase you want to alter their colour.
